

## IntelliSIGHT Threat Intelligence Suite™

*"Local threats are the biggest blind spot for multinational corporations. Businesses must apply in-country insight and intelligence to determine all potential vulnerabilities, threats and risks to their most valuable assets."*

John Watters, CEO of iSIGHT Partners

### Who We Are

iSIGHT Partners is a corporate counter-intelligence firm that analyzes what the "bad guys" know about you and how they use that knowledge to exploit your business. Our teams use local sources, relationships and tools to assess sites and situations, which allows us to view threats from the local adversary's perspective.

iSIGHT Partners is based in Dallas, TX with offices in Washington, D.C., Dalian, China, Sao Paulo, Brazil and Pune, India. Our team of professionals has industry-leading experience in government, intelligence and business, with unmatched analytical capabilities that are deployed through a global network and best-in-class proprietary database of threats and risks.

### The Challenge and Solution

Companies often get threat intelligence information from disparate sources within their organization, with no consolidation and prioritization of the information. iSIGHT Partners' IntelliSIGHT Threat Intelligence Suite details the technical, tactical and strategic threats for clients on a daily basis and – most importantly – prioritizes the workflow to ensure that our clients' IT teams are focusing on the most important threats and vulnerabilities first. Why is this critical? Because IT teams can work hard all day, but if it's not on the right issue, their time is wasted and your company is at risk.

The IntelliSIGHT Threat Intelligence Suite helps prevent, detect and manage electronic crime by providing deep, actionable analysis of new vulnerabilities, exploits and malicious code activities that impact enterprise customers. Our IntelliSIGHT team focuses solely on technologies and issues that are strategically and operationally relevant and provides actionable intelligence to mitigate the associated risks.

### IntelliSIGHT Sources

iSIGHT Partners' analysts are leaders in the security industry who provide IntelliSIGHT customers with proprietary vulnerability information. Our teams research, gather and test proof-of-concept (PoC) and private exploit code and identify patches to help protect our customers. If a patch does not exist, we provide our clients with mitigation strategies until one becomes available.

iSIGHT Partners' Malcode Team gathers information regarding malicious code activity from online information-sharing groups and major anti-virus vendors, which provides our customers with the most up-to-date and relevant information. Each member of our Malcode Team either owns and/or participates in extensive private data sharing relationships with hundreds of security professionals globally.

Data sharing includes all data related to emergent threats, such as malcode, exploits, malicious URLs, de-obfuscation of code and more.

This information is used to analyze and respond with a comprehensive global view of threats as seen by all major anti-virus and security companies globally for emergent threats. Data from these private sources are also used in Global Incident Response and deep threat research to further broaden the scope of research and response, such as tracking malicious URLs related to a new malcode "wave" attack and all associated payloads.

iSIGHT Partners' Global Vulnerability Partnership (GVP) is another source of vulnerability information. Through the GVP, iSIGHT Partners offers generous compensation to outside contributors from around the world, who focus and report solely on vulnerabilities that pose a potential risk to our commercial and governmental customers. This additional source of information is another way our analysis goes deeper than the competition.

### IntelliSIGHT Deliverables

iSIGHT Partners offers three IntelliSIGHT service bundles that encompass a blend of vulnerability and threat data. Each level brings additional service, support and intelligence content to the customer and can include access to iSIGHT Partners' Global Intelligence Operations Analysts, customer-requested research papers and monthly personalized reports. See the table below for more information on our service bundles.

### The IntelliSIGHT Portal

The IntelliSIGHT Portal is a website repository where our clients can quickly access all of their IntelliSIGHT reports, from any location, with a username and password. The portal also provides a customer forum, where customers can anonymously share information and solutions with each other.

### Analyst Access

One of our most popular features is Analyst Access, which allows our clients to direct our analysts' research to an area of top concern. Clients are given direct access to our analysts, who are required respond within a pre-specified period of time.

### The iSIGHT Partners' Approach

Intelligence collection and analysis represent only the first phase of the action/mitigation cycle when dealing with electronic threats and sophisticated fraud actors. iSIGHT Partners' reports are intended to provide a framework for action, because "actionable intelligence" is key to our clients. Close interaction with our customers is central to that process and contributes an important piece of the overall intelligence development cycle.

To the extent that client information on specific attacks or proprietary issues can be shared and genericized, that information is integrated into our overall product set for the benefit of all our clients, thus providing a community defense model.
